GOVSENSE

Empowering Smarter Communities

GOVSENSE FOR CONTROLLERS / COMPTROLLERS

Streamline all of your financial processes such as accounting, accounts payable, accounts receivable, financial planning and analysis, taxes and fund accounting.

Efficiency & Accuracy

Controlling the data yourself, you can expedite accounting and closing processes while running accurate, dependable reports, driving down costs and maintaining compliance by using a single system.

Consistent information

When you use one system across all departments, you will have a single jurisdiction-wide version of the truth that you all can count on. With an integrated system, you can easily view reports in a timely fashion that were previously too complicated to compile across disparate systems.

Automate processes

Give Excel spreadsheets a break. Set up workflows to streamline the subtasks that slow you down, while maintaining good internal controls. Configure an unlimited number of workflows to make your tasks seamless and painless. Whether you need them to be transaction or vendor-based, workflows are as simple as drag-and-drop.

Real-time data

Don't let financial reporting drag on for weeks as employees extract and sift through data from multiple sources, each with its own software packages. Enjoy easy access to real-time data any time you want it nearly in any format you want – from dashboards to full reports – without relying on a data analyst to retrieve the numbers.
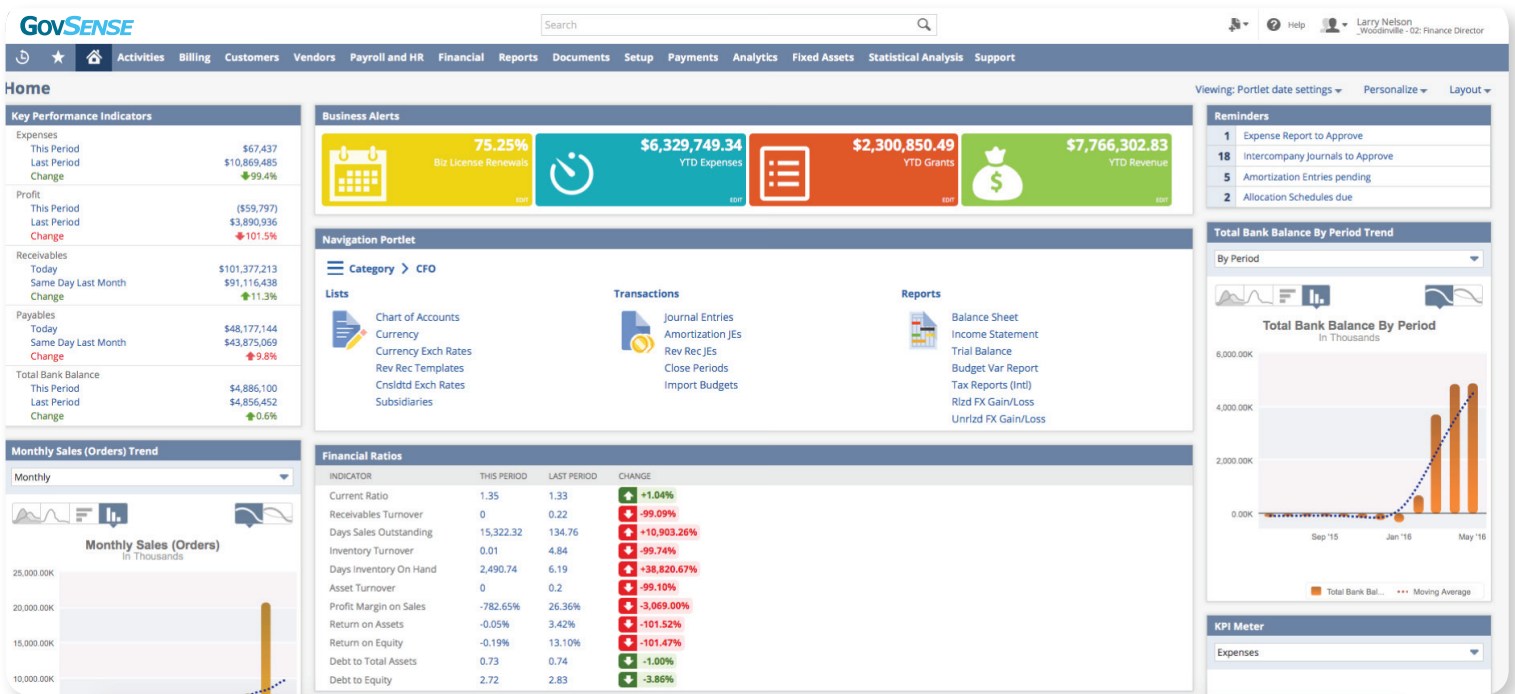

Increase Productivity

Excel is prone to errors, but it's often a necessary evil to fill in gaps left by other systems. But by streamlining processes efficiently in a single system, employees will decrease errors and have more time to focus on important core duties. Moving away from siloed systems saves the IT department 50-60% of their time that they previously spent on software maintenance. Nucleus Research found that moving from on-premise applications to the cloud eliminates an average of $23,000 in software licenses and $100,000 in programming annually.

With our full-service ERP system, we alleviate the headaches you usually face in your finance department:

Stay on top of accounts payable and accounts receivable in GovSense.

- Easily track fixed assets and quickly run reports without assistance from the IT department.
- Process card payments and manage your cash drawers securely and easily with our POS processing system.
- Create detailed budget forecasts and audit logs with just a few clicks.

Configurable Controller Dashboard

Built from the cloud since the first line of code, GovSense seeks to bring simple, forward-thinking solutions to local governments to enable smarter communities.
