GOVSENSE

The First Unified, True-Cloud Software System Designed Specifically for Local Government

The Benefits of True-Cloud Software

Everybody using the software is using the same, latest version — Product upgrades are fast, regular and at no additional cost.

You can trust the cloud — The state-of-the-art security and technical resources provided by cloud data centers are at a level no single jurisdiction can afford.

You don't have to download any software to your computer — Gone are the days of tedious, problematic and time-consuming software updates that often came with significant service fees from on-premise software vendors.

Get access anywhere at any time on any device — Because the software is accessed via the internet, you can work 24/7/365.

Get a 360° view of your jurisdiction — True-cloud solutions can be easily integrated with other systems, whether those systems are cloud-based or not.

Low TCO (total cost of ownership) — The multi-tenancy approach shares the common aspects of the software while only costing you for any additions necessary and specific to your needs.

You can still make a true-cloud system your own — The flexibility to service your own application allows you to manage, maintain and configure it immediately.

Seamless Interdepartmental Collaboration Paves the Way for Greater Transparency, Fluid Communication and Happier Citizens

Gain a 360° View of Your Community

GovSense is easy-to-use software tailored to your requirements. Your jurisdiction can save time and money from improved efficiencies, complete transparency and streamlined operations.

- **The Solution That Grows With You** — Buy it all at once; or one module at a time

- **Trust Your Enterprise Data** — Rely on a single version of the truth across all departments

- **Transparent from Day One** — Get easy inter-department access to all data

- **Fast Implementation** — Get up and running in just weeks; not months or years

- **Any Device, Anytime, Any Where** — Securely access all your information on the go

- **No Reliance on IT** — Benefit from the multi-tenancy approach of a true-cloud solution

GOVSENSE

The First Unified, True-Cloud Software System
Designed Specifically for Local Government

Get up and running in just weeks; not months or years

Our implementation approach is driven by business processes, not technology. GovSense utilizes the agile implementation methodology that results in rapid time-to-value for all jurisdictions, regardless of the challenges specific departments face. GovSense delivers user-friendly software solutions tailored to your requirements in weeks; not months or years.

About GovSense

GovSense built the first unified, true-cloud solution designed specifically for local government. GovSense empowers jurisdictions with flexible, easy-to-use software that enables collaboration in finance and accounting, budgeting, utility billing, fund and project management, economic development, asset management, GIS, inspections and enforcement, planning, and permitting and licensing.

- GovSense leaders have over 40 years of experience with software solutions consulting and implementations.
- We have extensive experience with true-cloud technology and how to leverage the cloud to improve government processes in revolutionary ways.
- The GovSense team is closely connected with the needs of local government and the technology that can meet those needs.

GovSense Modules Overview

GovSense provides end-to-end functionality for all your jurisdiction's needs. The modules can be purchased all at once or one at a time, and are categorized as follows for clarity in explaining the endless possibilities for inter-departmental collaboration:

Land Management Modules

Planning — Manage responsibility, resource allocation and deadlines; monitor open tasks through intuitive, fully configurable dashboards.

Permitting — Keep pace with normal and seasonal workloads to serve customers quickly; expedite the permitting process with efficient workflows and status updates.

Inspections — Efficiently assign inspectors and gain high visibility into status of projects; automate re-inspections scheduling and fee calculations.

Licensing — Auto-generate renewals, emails and payment workflows no matter the type of license being processed; manage holds, alerts and external communications.

Code Enforcement — Store municipal codes for easy reference and quickly resolve complaints online; auto-generate notices, emails and letters.

GIS — Use geo-spatial data to make informed decisions and build smart communities; connect financial data with spatial data for increased visibility.

Economic Development — Utilize CRM to manage entire lifecycles of projects and incentives; collaborate with businesses to ensure business retention and expansion.

Financial Management Modules

Accounting — Expedite accounting and closing processes while running accurate, dependable reports; manage compliance by using a single, unified system.

Budgeting — Decrease the time it takes to create, analyze and adjust budgets; visibility into all departments allows faster, more informed decision making.

Fund Management — Identify the sources of your jurisdiction's funds; demonstrate how efficiently the funds are being used according to their designated purposes.

Asset Management — Create and manage your asset inventory for both tangible and intangible assets; ensure proper utilization, maintenance and disposal.

Utility Billing — Utilize online utility billing and payments; reduce the need for in-person visits and decrease the number of overdue bills.

HCM/Payroll — Access employee information online to manage the entire process from "hire to retire"; process online payroll, track benefits and evaluate your workforce.

Project Management — Plan and manage all types of projects by easily collaborating with all stakeholders; automate tasks, notifications and reminders.
